Olsen G.J., Soyin M.L.;
"Draft sequence of the Glardia lamblia genome.";
Submitted (MAR-2003) to the EMBL/GenBank/DDBJ databases.
-!- CAUTION: The sequence shown here is derived from an EMBL/GenBank/DDBJ whole genome shotgun (WGS) entry which preliminary data.

Genes Dev. 2:1424-1438(1988)
-!- FWNTION: Sequence-specific transcription factor which is part of a developmental regulatory system that provides cells with specific positional identities on the anterior-posterior axis.
-!- SUBCELLUAR LOCATION: Nuclear.
-!- SIMILARITY: Belongs to the Antp homeobox family. Deformed
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Mus musculus (Mouse).

-1- FUNCTION: Sequence-specific transcription factor which is part of a developmental regulatory system that provides cells with specific positional identities on the anterior-posterior axis.

-1- SUBCELLULAR LOCATION:
-1- DEVELOPMENTAL STAGE: Expressed in whole embryos and fetuses at 5-9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 MEDLINE-8937858; PubMed-2570724; Glampaolo A., Acampora D., Zappavigna V., Pannese M., D'Esposito M., Care A., Faiella A., Stornaiuolo A., Russo G., Simeone A., Boncinelli E., Peschle C.; Boncinelli E., Peschle C.; Differential expression of human HOX-2 genes along the anterior-posterior axis in embryonic central nervous system.";
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      weeks from conception.
SIMILARITY: Belongs to the Antp homeobox family. Deformed

The antigenic peptide is used to produce anti-hd17 antibodies (Abs). The Abs can be induced in a patient, or used for antibodies (Abs). The Abs can be induced in a patient, or used for antibodies (munisation, for the treatment of diseases in which hd17 is involved, e.g. gastric and duodenal ulceration; gastro-oesophageal reflux disease and cancer
type GRRH sequence and a spacer attached to either the Norder Compared to the spacer molecules serve as a link through which the immunomimic is attached to an immunological carrier such as diphtheria toxoid (DT) and also affects the immuno response generated by the vaccinated mammal against the immunomimic. Compositions comprising these peptides may be used for treating a mammal for gonadotropin and gonadal steroid hormone associated dependent disease or for providing immunological contraception in mammals. They can also be used for treating breast cancer, uterine and other gynaecological cancers, endometriosis, uterine fibroids, prostate cancer, or benign prostatic hypertrophy
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Human gastrin 17; antigenic peptide; immunisation; treatment;
gastro-oesophageal reflux disease; gastric; duodenal; ulceration; cancer;

(GERD) that comprises administering to a patient an immunogenic composition which generates anti-gastrin antibodies, which bind to gastrin, in a patient; and administering histanine H2 antagonist or a proton pump inhibitor. The method provides a more effective method for controlling acid output by the stomach. The therapy is less costly. High gastrin levels associated with standard therapies are neutralized and undesirable side effects are reduced. The method permits a reduced dosage of acid reducing agent both at the acid producing level as well as the acid production stimulating level (gastrin). Reduction of dosages is acid production stimulating level (gastrin). Reduction of therapy with H 2 agonists or proton pump inhibitors, anti-gastrin 17 antibody titers can be maintained by occasional booster shots while gastric acid inhibitor dosing is reduced. Immunization allows a sufficient time for the esophagitis to completely heal and no surgery is required. The present sequence represents a carboxy-terminal spacer used along with a human heptadecagastrin (G17) immunomimic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            invention relates to the treatment of gastroesophageal reflux disease
                                                                                                                                                                                                                                       Gastroesophageal reflux disease; GERD; gastrin, anti-gastrin antibody; histamine H_2; proton pump inhibitor; acid output; stomach; therapy; esophagitis; immunogen; human; heptadecagastrin; immunomimic; G17.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Method for treatment of gastroesophageal reflux disease (GERD)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                100.0%; Score 45; DB 3; Length 7; 100.0%; Pred.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The invention relates to an immunogen comprising a peptide from the cholecystokinin (CCK)-B/gastrin-receptor conjugated to an immunogenic cholecystokinin (CCK)-B/gastrin-receptor conjugated to an immunogenic condition caused by gastrin-dependent malignant cell growth that condition caused by gastrin-dependent malignant cell growth that comprises administering to an animal an arti-CCK-B/gastrin-receptor immunogen; (2) for treating a gastrin-dependent tumour that comprises and bind to the CCK-B/gastrin-receptors in the tumour cells; (3) for detecting a gastrin-receptors in the tumour cells; (3) for that comprises exposing an anti-gastrin-receptor antibody to cells; (4) for detecting a tumour blopsy sample and detecting the CCK-B/gastrin-receptor in the sample; and (4) a method for diagnosing a gastrin-receptor antibodies to a patient possessing a colorectal tumour gastrin-receptor antibodies to a patient possessing a colorectal tumour cand imaging the tumour by scintigraphic scanning. The methods can be used for the detection and treatment of tumours such as gastrointestinal, colorectal, stromach, pancreatic and hepatocellular cancers. The present sequence represents a specifically claimed spacer sequence of the immunogen. This sequence is aspecifically claimed to make the immunogene capable of inducing specific immune responses
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     of a cholecystokinin-gastrin receptor - for producing antibodies for detection and treatment of gastrin-dependent tumours, e.g.

The invention relates to treating a gonadotropin hormone-dependent or gonadal steroid hormone-dependent cancer. The method comprises administering anti-GRRH antibodies which bind and neutralize Gonadotropin Releasing Hormone (GRRH) in vivo. The anti-GRRH immunogenic composition comprises a GRRH immunogenic peptide conjugated through the terminal Cys of the spacer peptide to an immunogenic carrier, preferably diphtheria or tetanus toxoid, with carrier/peptide ratio being in the range of 4.7 to 30.1 peptide molecules per carrier molecule. The method is used to treat GRRH-dependent cancer, particularly of the breast, uterus or prostate, preserved extrogen-dependent cancer, endometriosis or prostatic hypertrophy. The present sequence represents a spacer sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Combination useful in the treatment of pancreatic cancer or in the prevention of cancer cell metastasis, comprises an anti-gastrin effective immunogenic composition, and at least one chemotherapeutic agent.
                                                                                                                                                                                                     Administering antibodies or immunogenic compositions against gonadotropin releasing hormone is useful to treat gonadotropin hormone-dependent or gonadal steroid hormone-dependent disorders such as breast and prostate
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Gastrin; immunogenic; chemotherapeutic; cancer; cytostatic; pancreatic;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The invention relates to a combination treatment for pancreatic cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  100.0%; Score 45; DB 5; 100.0%; Pred.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 This invention describes a novel method for the treatment or preventing hypergastrinemia by administering to a patient a gastrin G17 and/or G34 peptide fragment linked by an amino acid spacer to an immunogenic carrier. The methods are used to treat hypergastrinemic patients, paticularly those with permicious anemia, those receiving treatment with anti-ulcer agents such as proton pump inhibitors (particularly omeprazole or lansoprazole) or H 2 receptor blocking agents or antagonists, or those having colorectal disorders or diseases. This sequence represents a spacer peptide used in the construction of the immunogenic construct

                                                                                                                        ઠે
                                                                                                                                                                        ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 condition mediated by eotaxin comprising generating an active immune response in the subject to eotaxin. Also described: (1) an immunogenic composition (C) comprising eotaxin or its peptide fragment coupled to an immunogenic protein carrier; (2) producing (C); and (3) a pharmaceutical formulation for use as a vaccine comprising (C) and an adjuvant and a vehicle. (C) has antiasthmatic and antiallergic activities, and can be used in vaccines. The method is useful for treating a subject for a condition mediated by eotaxin, e.g. asthma, allergy or allergic disease. The present sequence represents a spacer peptide, which is used in the exemplification of the present invention.
The combination comprises: (a) either an anti-gastrin effective immunogenic composition (A) or an anti-gastrin and/or anti-gastrin receptor effective immunological agent; and (b) at least one chemocherapeutic agent for inhibiting cancer growth. The immunological agent is a monoclonal or polyclonal antibody derived from antisera produced in patients by immunization with (A). The combination is used for the treatment of pancreatic cancer or in the prevention of cancer cell metastasis. The present sequence represents a synthetic peptide

The present invention relates to injectable liposomal compositions (1) for delivery of a water-soluble substance e.g. immunomimic peptides. (1) comprises several liposomal vesicles comprising a high weight ratio of a lipid to an encapsulated water-soluble substance so as to achieve a high efficiency of encapsulation. The immunomimic peptide is chosen from a setting elif (ADH8921), and human chorionic gonadotropin (hCG) peptide (ADH8921) and human chorionic gonadotropin (hCG) peptide (ADH8921) and human chorionic gonadotropin (hCG) peptide (ADH89220 and ADH89222, and ADH89225). (1) comprising vaccine directed against hormone or hormone cognate receptors, where the vaccine directed against hormone communomimic peptide such as gastrin G-17 or G-34 is useful for treating gastrointestinal malignancy, and non-gastrointestinal tumors useful as contraceptive and for treating cancers in male and female reproductive systems. The present sequence is a spacer peptide:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ö

                                                                                                                                                                                                                                                                                                                                                                                                                                                                         This invention relates to a novel method of treating a subject for an inflammatory condition which results from eosinophil accumulation which comprises generating an active immune response in the patient comprising autoantibodies to eotaxin and interleukin (IL)-5 (or IL-4, IL-9 and IL-13). The invention may be useful for the development of compounds with an antiinflammatory, antiasthmatic or antiallergic activity or for the production of a vaccine. The composition and methods are useful for preventing or treating inflammatory conditions resulting from eosinophil accumulation, such as asthma, allergy or allergic diseases. The present sequence is that of a spacer peptide which may be used within the method
                                                                                                                                                                                                                                                                                                                                                                                                   Treating inflammatory conditions resulting from eosinophil accumulation (e.g. asthma, allergy or allergic disease) comprises generating an active immune response against eotaxin and interleukin-5.
                                                                                                                        inflammatory condition, eosinophil accumulation, immune response; autoantibody; ectaxin; interleukin; IL-5; IL-4; IL-9; IL-13; antiathmatic; antiathmatic; antiallergic; vaccine; asthma; allergy; altergic disease; spacer peptide.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Cytostatic; Contraceptive; Vaccine; immunomimic peptide; gastrin G-17; gastrin G-34; gonadotropin releasing hormone; GnRH;

The present invention relates to injectable liposomal compositions (1)

for delivery of a water-soluble substance e.g. immunomimic peptides. (1)

comprises several liposomal vesicles comprising a high weight ratio of a

lipid to an encapsulated water-soluble substance so as to achieve a high

cefficiency of encapsulation. The immunomimic peptide is chosen from

gastrin G-17 (ADH89216 to ADH89213 and ADH89223), gastrin G-34 (ADH89217-

ADH89219), gonadotropin releasing hormone (GnRH) peptide (ADH892217-

ADH89222 and ADH89225). (1) comprising vaccines directed against hormone

comprises at least one:

CC ADH89222 and ADH89225). (1) comprising vaccines directed against hormone-

comprise at hormone cognate receptors, where the vaccine comprises at least one:

CD ADH89222 and ADH89225). (2) comprising vaccines directed against hormone-

comprises several lipid such as gastrin G-17 or G-34 is useful for

treating gastrointestinal malignancy, and non-gastrointestinal tumors

such as thyroid and lung cancer; or GnRH or hCG immunomimic peptide is

useful as contraceptive and for treating cancers in male and female

reproductive systems. The present sequence comprises residues 1-6 of G-34

linked to a spacer peptide at the C-terminal end.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                substance e.g. vaccine for preventing pregnancy, comprises several liposomal vesicles comprising a high weight ratio of lipid to encapsulated water-soluble substance.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Human gastrin 17; antigenic peptide hG17(1-9)-Ser9; immunisation;

The invention relates to the treatment of gastroesophageal reflux disease (GERD) that comprises administering to a patient an immunogenic composition which generates anti-gastrin antibodies, which bind to gastrin, in a patient; and administering histamine H 2 antagonist or a proton pump inhibitor. The amethod for provides a more effective method for controlling acid output by the stomach. The therapy is less costly, High gastrin levels associated with standard therapies are neutralized and cundesirable side effects are reduced. The method permits a reduced dosage of acid reducing agent both at the acid producing level as well as the acid production stimulating level (gastrin). Reduction of dosages is desirable for prolonged treatment of GERD. In a combination therapy with H 2 agonists or proton pump inhibitors, anti-gastrin 17 antibody titers can be maintained by occasional booster shots while gastric acid inhibitor dosing is reduced. Immunization allows a sufficient time for the esophagitis to completely heal and no surgery is required. The present sequence represents a human heptadecagastrin (G17) immunomimic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Cancer; lung; oesophagus; liver; immunogen; hormone; gastrin 17; G17; gastrin receptor; cholecystokinin-B; CCK-B; Barrett's condition; gastrin-induced tumour; immune response.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ö
                                                                                                                                                                                                                                                                             nmmunogenic compsn. for producing anti-human gastrin 17 antibodies - used
for treating e.g. gastro-oesophageal reflux disease, gastric and duodenal
ulceration or cancer.
                                                                                                                                                                                                                                                                                                                                                                                                     AAR74295 and AAR74297 are human gastrin 17 (hG17) antigenic peptides, used to produce anti-hG17 antibodies (Abs). The Abs can be induced in a patient, or used for passive immunisation, for the treatment of diseases in which hG17 is involved, e.g. gastric and duodenal ulceration; gastro-oesophageal reflux disease and cancer
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Gastroesophageal reflux disease; GERD; gastrin; anti-gastrin antibody;

                                                                                                         The specification describes a method of treating a cancerous or precancerous condition of the lung, oesophagus or liver. The method involves administering to a patient an immunogen which induces antibodies in the patient against peptide hormone gastrin 17 (G(17) and/or a gastrin receptor, e.g. cholecystokinin (CCK)-B. The method is useful for treating cancerous or pre-cancerous condition of lung, oesophagus or liver, where the condition is cancer, or Barrett's condition. The treatment prevents or delays progression of the Barrett's oesophagus to a cancerous state. The method is also useful for treating the growth of a gastrin-induced tumour or pre-cancerous lesion of the lung, liver or oesophagus. ABP73032-35 represent peptides which induce specific immune responses to G17. The peptides comprise an amino terminal fragment of G17 and a carboxy-terminal spacer

                                                                                                                                       The sequences given in AAR78282-85 represent immunomimetics to gonadotropin releasing hormone (GnRH). These peptides comprise the wild type GnRH sequence and a spacer attached to either the N- or C- terminal. The spacer molecules serve as a link through which the immunomimic is attached to an immunological carrier such as diphtheria toxoid (DT) and aslos affects the immuno response generated by the vaccinated mammal against the immunomimic. Compositions comprising these peptides may be used for treating a mammal for gonadotropin and gonadal steroid hormone associated dependent disease or for providing immunological contraception in mammals. They can also be used for treating breast cancer, uterine and other gynaecological cancers, endometriosis, uterine fibroids, prostate cancer, or benign prostatic hypertrophy
                                            New anti-gonadotropin releasing hormone immunogenic composition(s) - used for treating gonadotropin and gonadal steroid hormone dependent disease(s) and providing contraception.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Gonadotropin releasing hormone; GnRH; leukotoxin; LKT; fusion protein; antibody; immunogenic; chimeric; vaccine; testosterone; androgenic; non-androgenic; steroid; reduction; weight gain; muscle distribution; fat distribution; male pattern; boar taint; flavour; impairment; reliable; immunocastration; meat production.

          analogues which may be used as an alernative to sequence AAYS8135 in embodiments of the present invention. The invention relates to a method of using two GRAH immunogen vaccines to produce uncastrated male animals for meat production, one vaccination prior to or during the fattening period to reduce circulating testosterone levels, and the second vaccination about 2-8 weeks before slaughter to substantially reduce androgenic and/or non-androgenic stroids. The invention is used to produce food animals that exhibit the weight gain and muscle/fat distribution of male animals without the problems associated with male animals. Such problems include "boar taint", a urine-like odour found in cooked meat of uncastrated pigs which is caused by steroids stored in the tissues, and similar flavour impairments in the meat of other intact male animals. The invention is more reliable than prior art immunocastration
Sequences AAY58136-Y58141 represent gonadotropin releasing hormone (GnRH)
